

Project Summary

- I analyzed household data using Python.
- I identified numerical and categorical data.
- I calculated mean, median, and mode for income and age.
- I calculated range, variance, standard deviation, and IQR to understand data spread.
- I used histograms and boxplots to see the distribution of income and family size.
- I compared income based on education level and urban/rural areas.
- I studied the relationship between age and income using graphs.
- I learned how to understand data and basic statistics using Python.
